

IMTS
Inmate Meal Tracking System
By www.TURNSTILES.us
With EntraPASS Global Edition

IMTS works with existing inmate cards and security/tracking systems. IMTS can be used with finger print scanners like the V-Pass FX, or other personal identification devices. IMTS works as a standalone implement or in conjunction with existing security/tracking apparatus.

When IMTS is run in conjunction with existing security/tracking measures, IMTS works in real time even when new inmates are added into the system. The same thing applies when an inmate is removed from the system.

IMTS helps to prevent tailgating and repeat visits into the meal service area using an anti pass-back feature.

Inmate Meal Tracking System

A linked external LCD monitor can be posted near the ingress/egress point to visually display the inmates head shot, along with identity, attributes, etc, which would also be seen on the controlling

If desired, real time alarms may be instituted and connected to a strobe/siren, which would sound at the instance that tailgating or a repeat visit is attempted.

This is achieved using a forgiveness timer. Video surveillance is also an option.

A meal activity/history log may be created to track meals served, not served and/or declined for each day of the month for each inmate.
