

Thank you for choosing TURNSTILES.us for your barrier optical turnstiles. We are going to etch your logo onto the barrier panels. To do this we need your help. Please provide a pdf file scaled to fit the image size area shown below (13.312" x 12.312"). That is the max image area available for your logo.

Just email the logo to wanita.savage@turnstiles.us

Understand that any logos will be on one side of the panels (that are clear) so you must let us know what side you want the logo to be placed...will it be readable going in, or readable going out.

VERY IMPORANT...the art you send must be designed in B&W, so there is a positive/negative effect. We will blast in the black areas, and that will appear frosted. So in logos with multiple colors, you have to make them black and white and be aware that very fine lines might be lost due to the process. Any white areas under about 1/16" thick may drop out in the final production. If the pressure sensitive resist is too thin it can blow off in the sandblasting process.
