

ANTI-REACH BARRIER

The Anti-Reach Barrier is a specialized part that may be critical to the security of your turnstile arrangement. When a turnstile is next to an ADA door, someone could reach through the turnstile bars from the outside and push open the door. The Anti-Reach Barrier prevents this breach, reinforcing the security of your turnstile and gate system. If roofline protection is also needed, see our Turnstile Canopies and Shelters. Our products are crafted with pride in the USA.
