

## ANTI-REACH BARRIER

The Anti-Reach Barrier is a specialized part that may be critical to the security of your turnstile arrangement. When a turnstile is next to an ADA door, someone could reach through the turnstile bars from the outside and push open the door. The Anti-Reach Barrier prevents this breach, reinforcing the security of your turnstile and gate system. If roofline protection is also needed, see our Turnstile Canopies and Shelters. Anti-Reach Barriers are crafted with pride in the USA.

*To Install:  
Secure to concrete foundation  
and outer edge of door frame.*
