

BCS Ballistic Compact Scanner

Discreet Disc Metal Detection System

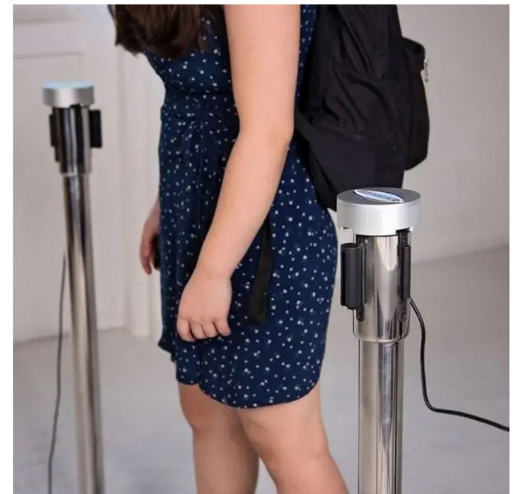

Traditional metal detectors create an unwelcoming, prison-like environment. Our discreet sensors provide powerful detection technology without compromising your space's open and inviting feel.

PORTABLE – The complete system weighs only 20 pounds
FRIENDLY – Very small stealthy profile, no TSA-like archway
EASY – Sets up in 5 minutes, easy to operate, easy to learn
ACCURATE – highly sensitive military-grade tech reduces errors

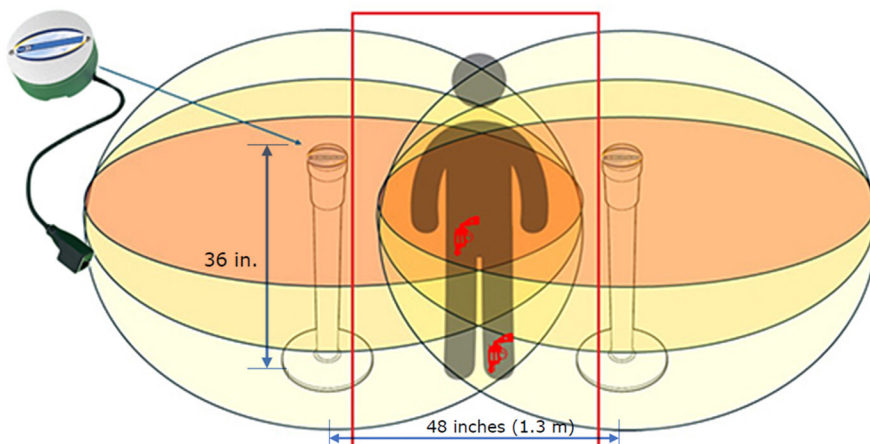

Key Features

- Low-profile design that blends into architectural spaces
- Detects concealed weapons, vape devices, and metallic objects
- Advanced magnetic anomaly detection (MAD) with digital signal processing (DSP)
- Portable and lightweight: deploy in minutes
- Works indoors or outdoors with optional cordless battery operation
- Auto-calibration and adjustable sensitivity
- Wi-Fi and network monitoring options
- Relay output for gate or turnstile integration
- Multiple units can run in parallel for wider coverage

Detection Range

Read Range: sensors detect a field approximately 3 feet out from the sensor (yellow). Reporting is focused on the overlapped region that is common for both sensors (middle). Red is most sensitive area of detection.
